

AMENDMENTS TO THE CLAIMS

What is claimed is:

Claim 1 (cancelled)

Claim 2 (cancelled)

Claim 3 (currently amended) A swimming pool, comprising:

a cover configured to cover the swimming pool;

a reel carrying said cover; and

a pool cover box assembly for containing said cover, comprising:

a plurality of walls defining the sides of said pool cover box assembly;

a bottom, at least one of said bottom and said plurality of walls having locating

features; and

at least one equipment mounting assembly located in said pool cover box assembly by contacting said locating features, comprising:

at least one positioning feature configured to engage two of said plurality of walls; and

at least one mounting plate, said at least one positioning feature adjustably connected to said mounting plate ~~The swimming pool of claim 1,~~ wherein at least one said positioning feature comprises:

at least two sliding members including a first sliding member and a second sliding member, each said sliding member slidably connected to said mounting plate; and

at least two connecting members including a first connecting member and a second connecting member, each connecting member having two ends, one end of said first connecting member being pivotally connected to said first sliding member, an other end of said first connecting member being pivotally connected to an end of said second connecting member, an other end of said second connecting member pivotally connected to said second sliding member.

Claim 4 (original) The swimming pool of claim 3, wherein said plurality of walls include a front wall and a rear wall, said first sliding member configured to engage said front wall and said second sliding member configured to engage said rear wall.

Claim 5 (original) The swimming pool of claim 3, wherein said at least one positioning feature further comprises:

at least two bolts; and

at least two slots in said at least one mounting plate, said at least two slots being oriented in a substantially horizontal manner, said at least two slots and said at least two bolts providing said slidable connection.

Claims 6 - 12 (cancelled)

Claim 13 (currently amended) A pool cover box assembly for housing a swimming pool cover, comprising:

a plurality of walls defining the sides of said pool cover box assembly;

a bottom, at least one of said bottom and said plurality of walls having locating features;
at least one equipment mounting assembly located in said pool cover box assembly by
contacting said locating features, comprising at least one positioning feature configured to
engage two of said plurality of walls; and
at least one mounting plate, said at least one positioning feature adjustably connected to
said mounting plate. ~~The pool cover box assembly of claim 11,~~ wherein at least one said
positioning feature comprises:

at least two sliding members including a first sliding member and a second sliding
member, each said sliding member slidably connected to said mounting plate; and

at least two connecting members including a first connecting member and a
second connecting member, each connecting member having two ends, one end of said first
connecting member being pivotally connected to said first sliding member, an other end of said
first connecting member being pivotally connected to an end of said second connecting member,
an other end of said second connecting member pivotally connected to said second sliding
member.

Claim 14 (original) The pool cover box assembly of claim 13, wherein said plurality of walls
include a front wall and a rear wall, said first sliding member configured to engage said front
wall and said second sliding member configured to engage said rear wall.

Claim 15 (original) The pool cover box assembly of claim 13, wherein said at least one
positioning feature further comprises:

at least two bolts; and

at least two slots in said at least one mounting plate, said at least two slots being oriented in a substantially horizontal manner, said at least two slots and said at least two bolts providing said slidable connection.

Claims 16 - 21 (cancelled)

Claim 22 (currently amended) An equipment mounting assembly for mounting equipment in a pool cover box, comprising:

at least one positioning feature configured to engage at least two walls of the pool cover box; and

at least one mounting plate, said at least one positioning feature adjustably connected to said mounting plate. ~~The equipment mounting assembly of claim 20,~~ wherein at least one said positioning feature comprises:

at least two sliding members including a first sliding member and a second sliding member, each said sliding member slidably connected to said mounting plate; and

at least two connecting members including a first connecting member and a second connecting member, each connecting member having two ends, one end of said first connecting member being pivotally connected to said first sliding member, an other end of said first connecting member being pivotally connected to an end of said second connecting member, an other end of said second connecting member pivotally connected to said second sliding member.

Claim 23 (original) The equipment mounting assembly of claim 22, wherein said at least one positioning feature further comprises:

at least two bolts; and

at least two slots in said at least one mounting plate, said at least two slots being oriented in a substantially horizontal manner, said at least two slots and said at least two bolts providing said slidable connection.

Claims 24 - 28 (cancelled)
